Commercial Presentation Theatre & Process Equipment Zone (Hall 1)

Day: 23rd May
Time: 16,00 - 16,20

BAKER HUGHES
Speaker: Chris Elliot

Brownfield CO2 Storage - Opportunities and Risks

Leveraging existing infrastructure and decades of reservoir knowledge make brownfield development an incredibly attractive option for CO2 storage development. However previous penetrations and the limitations associated with retrofit/repurposing can pose serious risks to project success. Baker Hughes is working to reduce the commercial and technical risk associated with the conversion of brownfield assets to CO2 storage. This presentation discusses key technologies and approaches to brownfield evaluation and intervention including pre-P&A intervention campaigns, & field-scale risk assessment.
